

— WHAT WE DO

There are no shortcuts.

The foundations that have always made a go-to-market (GTM) organization work are still required, at every size and every stage: messaging, ideal customer profile (ICP) and personas, differentiators, proof points, and buying signals. Most teams do not have them written down, or have them and have not agreed on them. We align your team on those foundations, encode them into an AI-native operating system tuned to your business, your brand, and your goals, and keep that system learning as the brand evolves. **You own it when it is done.**

— THE OFFERINGS

Four ways to work with us.

Diagnose, build, operate, and continue to execute. Start with the Scan or go straight to a build: the sequence is a recommendation, not a gate.

01

ANATOMY SCAN

A two-week diagnostic of your GTM foundations and your AI readiness. You leave with foundations your team has agreed on, and a sequenced roadmap you can run with or without us. The fee credits into an Anatomy OS build.

\$5,000

Two weeks

02

ANATOMY OS

The full build: an AI-native go-to-market operating system for your team, with your context, your standards, and your governance written in. Yours at handover, following enablement.

\$25,000

Three to six weeks

03

AI SPRINT

Scoped project work against your roadmap. We ship skills and agents into the systems your team already uses, documented, with the people who will run them trained on them.

Starting at \$5,000

Scoped per project

04

FRACTIONAL PARTNER

A standing seat in marketing, go-to-market, and GTM engineering, as one seat or several. We keep the system current, sequence the work, and say when and where AI makes sense.

\$8,500 per month

Ongoing

— EVERY ENGAGEMENT

What is true in all four.

- ❑ **Built from your material, never a template.** Your ICP, personas, messaging, differentiators, and proof points are the input. If we cannot get them, we align the team on them first.
- ❑ **Yours at handover, following enablement.** Architecture, skills, agents, runbooks, and written standards. There is no version of this where the system leaves when we do.
- ❑ **Measurement attached from the start.** Pipeline, cycle time, and cost per outcome, instrumented while we build rather than reconstructed afterwards.
- ❑ **An honest answer about AI.** Not every task is a use case, and we will tell you which ones are not.

— WHO THIS IS FOR

Lean teams, large expectations.

Start-ups and scale-ups in B2B technology, roughly Series A through Series C, with a go-to-market team of 1 to 100. The company can be far larger: the GTM team is what we size to. The buyer is usually a VP of marketing, a chief revenue officer (CRO), or a founder still carrying go-to-market personally.

The shared condition is always the same: a lean team expected to produce like a large one.

Try it before you talk to us. The Claude skills library at gtmanatomy.ai is free, and runs the same method at a smaller scope.
